JUNIPER CAMPUS AND BRANCH DEPLOYMENT SERVICE DATASHEET

Service overview

Juniper Campus and Branch Deployment Service provides expert designs and plans for Wi-Fi networks to deliver optimal performance. This service helps to enable, provision, and manage Juniper access points (APs) through Juniper campus and branch cloud services. The service maps the most efficient network coverage, identifies the capacity of connected devices within their specific coverage areas, assesses how they are supported, and plans the number of APs required for specific use cases. Additionally, the service includes flexible add-ons that extend to additional APs and Juniper wired design and deployment.

Service description

The number of wireless internet users around the globe is increasing every day. Add the growing mobile workforce to those numbers and it's easy to see why wireless internet access has become critical for enterprises of all sizes. Every modern organization must optimize their wireless networks, and many need the help of experts to avoid the risk of inadequate coverage, underprovisioning, and poor monitoring of network performance, including wireless access points (APs) and security threats.

Juniper Global Services offers Juniper Campus and Branch Deployment Service, which gives organizations access to Juniper expert consultants with extensive deployment knowledge across Juniper EX Series Switches, Juniper access points, and Mist™ cloud. This service is offered as a basic or custom package, including several add-on options for organizations of different sizes with additional needs.

Table 1. Juniper Campus and Branch Deployment Service options

Features	Basic	Custom
Discovery workshop	✓	✓
Predictive site design	✓	✓
Configuration creation	✓	✓
First office application (FOA)	✓	✓
Access points	Up to 50 APs	✓
Coverage area	Up to 50,000 square feet	✓
Templates	Up to 4 templates	✓

Customers can expand service with the add-on options below to scale for different sized networks.

Table 2. Optional service add-ons

Add-on Name	Description
Predictive site designs (add-on)	Up to 100 additional APs
Juniper Wired Assurance deployment (add-on)	Approx. 16 switches (across 5 floors), 2 additional switch templates
Juniper Wired Assurance configuration (add-on)	Configuration for up to 6 additional switches

Table 3. Juniper Campus and Branch Deployment Service components

Components	Description	Benefits
Discovery workshop	A Juniper consultant will review technical aspects of the deployment project and Mist cloud features to gather all relevant information required for planning and implementation	Smooth deployment ensured by final implementation plan prepared following detailed discussions and review with Juniper experts
Predictive site survey	Based on the information from the discovery workshop, Juniper consultant will conduct a predictive site survey using Wi-Fi RF planning software to design the wireless network coverage and capacity	Disruptions minimized via site wireless coverage and capacity design created by Juniper experts employing best practices and industry-known tools
Configuration creation	The Juniper consultant will create network configurations using templates for each site	Simplified deployment enabled by configuring templates in Mist cloud for each site
FOA	Support for first office enablement and readiness testing, followed by go-live activities	Immediate issue support for timely resolution by Juniper experts following deployment of the new network

Ordering information

To order the Juniper Campus and Branch Deployment Service, or for additional information, please contact your Juniper Account Manager.

For additional details such as scope, deliverables, eligibility, and exclusions, please refer to corresponding Service Description Document https://support.juniper.net/support/guidelines/.

Exclusion

The scope of this service is for enabling and deploying Juniper Campus and Branch Deployment Service only and does not include separately sold assessment, design, or migration services. If you require additional services, please contact your Juniper Account Manager.

Juniper Global Services

Juniper Global Services offers an evolving lifecycle suite of services that aligns AI with people, process, and technology to accelerate time to value and de-risk network investments. Through insights, automation, and a range of services, Juniper provides assured assistance and advantage across the entire services portfolio.

About Juniper Networks

Juniper Networks is leading the convergence of AI and networking. Mist™, Juniper's AI-native networking platform, is purpose-built to run AI workloads and simplify IT operations, assuring exceptional and secure user and application experiences—from the edge to the data center to the cloud. Additional information can be found at www.juniper.net, X, LinkedIn, and Facebook.
