The challenge

Rising demand for flexibility and scale

As businesses increasingly move toward cloud-based solutions and remote work becomes more prevalent, the demand for flexible and scalable networking solutions has skyrocketed. Yet managing network services in-house requires significant investment in hardware, software, and skilled personnel.

The capabilities you need

A more flexible way to handle connectivity needs

As a subscription-based model to consume network infrastructure, covering hardware, software, and services, NaaS enables organizations to outsource network setup, management, and maintenance. By offloading network management complexities, customers realize greater potential cost savings, scalability, and flexibility.

Scalability and agility

Quickly adapt network infrastructure to meet changing business requirements without having to manage physical hardware.

Emerging technologies

Easily customize and scale up or down network services on demand; enable the separation of network control and data forwarding using software-defined and virtualization technologies.

Cost-effectiveness

Avoid large upfront investments in hardware, software, and skilled personnel and pay for network services on a subscription basis.

Security

Rely on service providers that specialize in network security, ensuring robust protection against cyber threats and data breaches.

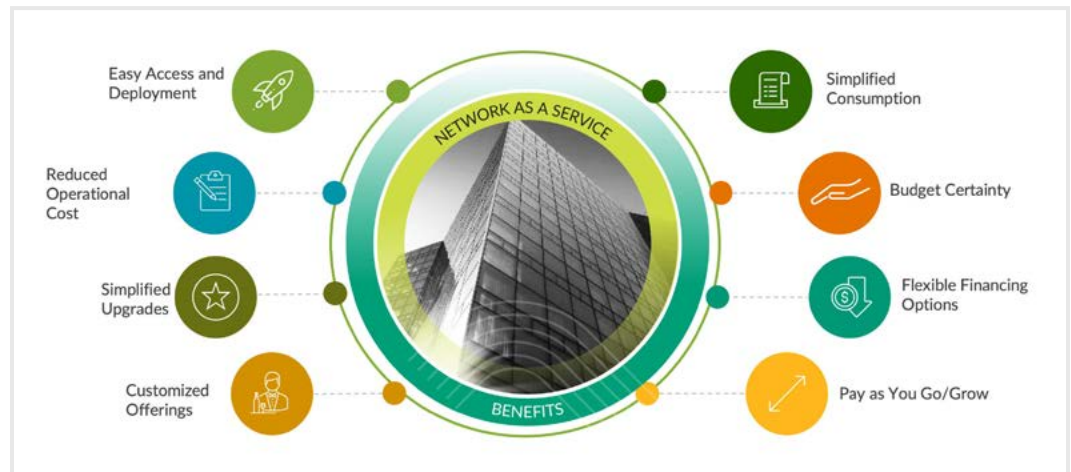

The answer: Juniper's NaaS

AI-Native Networking delivered as a service

Juniper's NaaS offering is a turnkey, flexible, and scalable full technology stack with secure **AI Ops** for wired, wireless, and **SD-WAN** solutions. The offering enables partners to deliver business outcomes utilizing Juniper's **AI-Native, cloud-native** technologies that are backed by Service Level Agreements (SLAs). NaaS continually assures excellent and consistent operator and end user experiences with lowest total cost of ownership.

Turning the traditional networking model on its head

Juniper's NaaS offering helps you transform your network experience to a flexible, consumption-based networking model that delivers the simplicity, agility, and efficiency your business deserves.

- Automated deployment and management**
Delivered as a cloud service and managed through web-based portals or APIs
- Flexibility in scaling**
Scaling network resources (devices, services) can be done on demand
- A true turnkey solution**
Consumed as a service, pay-as-you-go, or subscription-based pricing model, shifting costs to OpEx
- Simplified service delivery**
Delivered as software-based services, simplifying deployment and management
- Non-disruptive provisioning**
Seamless provisioning and updates via the cloud, reducing operational downtime

Our advantage

Financing and service creation

Juniper's NaaS offering can be managed through one of our many trusted **Managed Network Provider (MNP)**. Various payment and ownership options are available to our MNP partners or our end customers via a Network Subscription Agreement (NSA). Your MNP partner will work with Juniper Financial Services or one of its authorized financing partners to create a solution arrangement that's right for your business.

Why Juniper

The NOW Way to Network

Juniper Networks believes that connectivity is not the same as experiencing a great connection. Juniper's AI-Native Networking Platform is built from the ground up to leverage AI to deliver the best and most secure user experiences from the edge to the data center and cloud.
