Table of Contents

Introduction

Paragon Active Assurance is a programmable test and service assurance solution using software-based and traffic-generating Test Agents, easily used and delivered from the cloud as a SaaS solution or deployed on-premise in NFV environments.

These release notes accompany Release 4.2.1 of Paragon Active Assurance Control Center and detail its new features.

Build numbers:

- Control Center: 4.2.1.59

- Test Agent Appliance: 4.2.1.60

- Test Agent Application: 4.2.1.47

- Plugins: 4.2.0.29

NOTE: The 4.2.1 Test Agent packages require version 4.2.1 of Control Center.

A list of bug fixes is also provided as well as descriptions of limitations and known problems.

These release notes are available on the Paragon Active Assurance Documentation Web page at https://www.juniper.net/documentation/product/en_US/paragon-active-assurance.

General Notes

- Please note that not all features of Paragon Active Assurance are available to every customer; rather, availability is dependent on what product or service has been purchased.

New and Changed Features

There are no new features in this release.

Deprecated Features

There are no deprecated features in this release.

Known Issues

- PAALS-354: Configuring a large number of interfaces (40+) using Confd takes about 20% longer in Release 3.4 (Control Center and Test Agent) than in Release 3.3 (Control Center and Test Agent).

Resolved Issues

This section lists limitations that are resolved with this release.

- PAALS-1518: While you are upgrading Active Assurance to Release 4.2 or later, the **dh.pem** file is unexpectedly moved to the **certs_by_serial** folder.
